1. Information about the indicator	
Goal	Building resilient infrastructure, promoting inclusive and sustainable industrialization and innovation
Task	Promote inclusive and sustainable industrialization and, by 2030, significantly increase industrial employment and the share of industrial production in gross domestic product in accordance with national circumstances and double the corresponding figures in the least developed countries
The indicator	Share of GVA of manufacturing industry to GDP
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Value added in manufacturing as a share of gross domestic product (AVMI) is the ratio between GDP and GDP, both of which are presented in 2010 dollars. The AVMI per capita is calculated by dividing the AVMI in 2010 dollars by the population of a country.
Basic concepts:	Added value in the manufacturing industry. Labor productivity.
Justification and interpretation	Gross value added is defined as the volume of production minus intermediate consumption and is equal to the amount of employee compensation, the gross operating surplus of the government and corporations, the gross mixed income of unincorporated enterprises and taxes minus subsidies on production and imports, excluding net taxes on products Production belongs to industries belonging to sector C, determined by the international The Standard Industrial Classification of All Types of Economic Activity (ISIC), Rev. 4, or D is defined by the ISIC Revision Rev. 3. GDP is the sum of the gross value added of all resident institutional units in an economy. For the purposes of comparability over time and between countries, DSOP and GDP are estimated in terms of constant prices in US dollars. The current series is presented in 2010 prices.
4. Data sources and collection methods	
Data sources	Statistics of national accounts, demographic statistics
Data collection methods	Statistical surveys and administrative data
Unit of measure ment	Percentage, in 2010 prices US Dollar, in 2010 prices
Periodicity	Annually
5. Calculation method and other methodological considerations	
Calculation method:	The share of AVMI in GDP = AVMI/GDP*100. AVMI per capita = AVMI / population
Comments and restrictions:	Minor differences may occur due to 1) exchange rates for conversion into US dollars; 2) different base years used for constant price data; 3) assessment methods for the last period;

	4) Different versions of the revised versions of the SNA and ISIC used by countries.
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	The Republic of Kazakhstan, regions.
7. Comparability with international data/standards	Calculations of GDP indicators comply with international standards. The 2008 SNA prepared by the International Monetary Fund, the Organization for Economic Cooperation and Development, the Statistical Office of the European Communities, the United Nations and the World Bank was used as a methodological basis.
