

1. Information about the indicator	
Цель	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development
Задача	Strengthen domestic resource mobilization, including through international support to developing countries, to improve domestic capacity for tax and other revenue collection
Индикатор	Proportion of domestic budget funded by domestic taxes
2. Information about the organization	
Organization	Department of Tax and Customs Legislation of the Ministry of Finance of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator is defined as the share of tax revenues of the National Fund of the Republic of Kazakhstan in relation to the total revenue of the consolidated budget (excluding transfers). The share of corporate income tax and receipts for the use of natural and other resources of the National Fund of the Republic of Kazakhstan in relation to the total consolidated budget revenues (excluding transfers) is also determined.
Basic concepts:	The consolidated budget is the centralized monetary fund of the state, which unites the republican budget, the budgets of regions, cities of republican significance, the capital and the receipts of the National Fund of the Republic of Kazakhstan, without taking into account the mutually redeemable transactions between them. The National Fund of the Republic of Kazakhstan represents the assets of the state in the form of financial assets concentrated in the accounts of the Government of the Republic of Kazakhstan with the National Bank of the Republic of Kazakhstan, minerals transferred to fulfill tax obligations to pay mining tax, rental tax on exports of crude oil, gas condensate, royalties and shares of the Republic of Kazakhstan under the section products in kind or money from their sale, in the amount determined in accordance with the tax legislation of the Republic of Kazakhstan, as well as in the form of other property, with the exception of intangible assets.
Justification and interpretation	Tax burden indicators are indicators of how well a tax policy meets one of its main goals, a fair increase in income necessary for government. There is widespread recognition in the Addis Ababa Action Agenda and the 2030 Agenda that multiple sources of funding will be needed to meet the needs of the SDGs and that they will need to collaborate effectively. This includes the important role of domestic resources in achieving national development goals, and the important role of government intervention, including government resources such as ODA (official development

	assistance), which strengthen domestic capacities and broaden the income base. Indeed, especially in developing countries, vertical budget deficits (imbalances) will potentially widen as demand for higher government spending increases, especially in countries where there is significant pressure on central governments to provide high-quality infrastructure and basic services. In many cases, the implementation of the central Government's proposed budget is constrained by a poor revenue management system and/or a lack of a statistical framework for monitoring revenue flows. Given the unpredictable and volatile income levels in many developing countries, improved income statistics will help mitigate any possible budget deficits and support the sustainable development of national economies.
4. Data sources and collection methods	
Data sources	Administrative data from the IAIS E-Ministry of Finance (Form 17.2)
Data collection methods	Daily tax receipts, corporate income tax receipts and for the use of natural and other resources credited to the National Fund of the Republic of Kazakhstan in terms of budget classification codes and regions.
Unit of measurement	thousand tenge
Periodicity	Annually/January
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated in percentage terms by the ratio of tax revenues to the National Fund of the Republic of Kazakhstan to the total revenue of the consolidated budget and multiplied by 100% for the reporting financial year. Also, the share of corporate income tax and the share of revenue from the use of natural and other resources of the National Fund of the Republic of Kazakhstan to the total revenue of the consolidated budget is calculated and multiplied by 100% for the reporting financial year.
Comments and restrictions:	The tax revenues of the National Fund include the following types of taxes: - corporate income tax on legal entities of oil sector organizations; - tax on excess profits from organizations in the oil sector; - bonuses from organizations in the oil sector; - the tax on the extraction of minerals from the organizations of the oil sector; - rent tax on exports from oil sector organizations; - the share of the Republic of Kazakhstan in the division of products under concluded contracts from organizations in the oil

	sector; - an additional payment by a subsurface user operating under a production sharing contract from organizations in the oil sector.
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the EPIRGO website of the Ministry of Finance of the Republic of Kazakhstan
The level of disaggregation:	The data is disaggregated by budget classification codes in the category of tax revenues of the National Fund of the Republic of Kazakhstan.
7. Comparability with international data/standards	Income statistics published annually by the Organization for Economic Cooperation and Development (OECD) and its associated database, although limited to OECD countries and a specific time frame, provide a widely used and largely comparable methodology that could facilitate the calculation of this indicator. This annual publication provides a conceptual framework for determining which government revenues should be considered taxes. It presents a unique set of detailed and internationally comparable tax data in a single format for all OECD countries since 1965.
