

1. Information about the indicator	
Goal	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development
Task	Fully operationalize the technology bank and science, technology and innovation capacity-building mechanism for least developed countries by 2017 and enhance the use of enabling technology, in particular information and communications technology
Indicator (Indicator)	Proportion of individuals using the Internet
2. Information about the organization	
Organization	Bureau of National statistics Agency for Strategic planning and reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The proportion of people using the Internet is defined as the proportion of people who have used the Internet from anywhere in the last three months.
Basic concepts:	Internet users are people who connect to the Internet via any device, including a computer, mobile phone, game consoles, digital television anywhere (at work, at home, in public places). The Internet is a worldwide public computer network. It provides access to a number of communication services, including the World Wide Web, and carries e-mail files, news, entertainment, and data, regardless of the device used (it is assumed that it will be used not only through a computer, but also can be a mobile phone, tablet, slot machine, digital TV, etc.) Access can be via a fixed or mobile network.
Justification and interpretation	The Internet has become an increasingly important tool for accessing public information, which is an important means of protecting fundamental freedoms. The number of Internet users has increased significantly over the past decade, and Internet access has changed the way people live, communicate, work, and do business. Internet uptake is a key indicator monitored by policy makers and others assessing the development of the information society, and the growth of online content - including user-generated content - provides access to more information and services.
4. Data sources and collection methods	
Data sources Data	Official statistical information Bureau of National statistics Agency for Strategic planning and reforms of the Republic of Kazakhstan (based on data from the statistical form "Household survey questionnaire on the use of ICT").
Collection methods	Statistical objects are households and family members aged 6 years and older. The survey on the use of ICT in households is

	carried out on the basis of a sample observation method. The information base for the formation of a sample of households is the GRF.
Unit of measurement	annual
Periodicity	percentage
5. Calculation method and other methodological considerations	
Calculation method:	This indicator is determined by the ratio of the total number of household members using the Internet at the age of 6-74 years to the average annual population for the reporting year at the age of 6-74 years and multiplied by 100.
Comments and restrictions:	This indicator at the age of 6-74 years has been formed since 2011.
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website Bureau of National statistics Agency for Strategic planning and reforms of the Republic of Kazakhstan (www.stat.gov.kz)
The level of disaggregation:	The indicator can be formed by region (geographical and/or urban/rural), broken down by gender and age.
7. Comparability with international data/standards	The methodology for ICT statistics and the statistical form of ICT have been developed in accordance with the international recommendations of experts from the statistical offices of Germany and Spain, obtained within the framework of the KAZSTAT Project and the Eurostat standards.
8. References and documentation
