

1. Information about the indicator	
Goal	Ensuring the transition to rational consumption and production models
Task	By 2020, achieve environmentally sound management of chemicals and all wastes throughout their entire life cycle in accordance with agreed international principles and significantly reduce their release into air, water and soil in order to minimize their negative impact on human health and the environment.
The indicator	(a) Fulfilling information transfer obligations and obligations in accordance with the requirements of the Basel Convention; b) Fulfilling obligations to transmit information and fulfill obligations in accordance with the requirements of the Rotterdam Convention; c) Fulfillment of obligations to transmit information and fulfill obligations in accordance with the requirements of the Stockholm Convention; d) Fulfilling obligations to transmit information and fulfill obligations in accordance with the requirements of the Montreal Protocol.
2. Information about the organization	
Organization	Ministry of Ecology and Natural Resources of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator is defined as the proportion of disposed POPs-containing and chemical waste
Basic concepts:	Persistent organic pollutants are the most dangerous organic compounds that are resistant to decomposition, characterized by bioaccumulation and are the object of transboundary transport by air, water and migratory species, as well as deposited at a great distance from the source of their release, accumulating in terrestrial and aquatic ecosystems, causing destruction of the immune and endocrine systems of living organisms and various diseases, including oncological.
Justification and interpretation	Good quality of the surrounding water is essential for environmental protection, including: conservation of biodiversity; protection of human health during recreational use and drinking water consumption; support for human nutrition.
4. Data sources and collection methods	
Data sources	Website of the secretariat of the Stockholm Convention on Persistent Organic Pollutants
Data collection methods	Inventory of POP-containing waste
Unit of measurement	Percent
Periodicity	Every five years
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated as the total number of residents with access to water services divided by the total number of residents in localities.
Comments and restrictions:	-
6. Data availability and disaggregation	

Data availability and gaps:	The data is available on the website of the Ministries of Ecology and Natural Resources of the Republic of Kazakhstan.
The level of disaggregation:	The data is disaggregated at the country level
7. Comparability with international data/standards
