

1. Information about the indicator	
Goal	Protection, restoration of terrestrial ecosystems and promotion of their rational use, rational forest management, combating desertification, stopping and reversing the process of land degradation and ending the process of loss
Task	By 2020, ensure the conservation, restoration and rational use of terrestrial and inland freshwater ecosystems and their services, including forests, wetlands, mountains and drylands, in accordance with obligations arising from international agreements
The indicator	The share of specially protected natural areas
2. Information about the organization	
Organization	Committee of Forestry And Wildlife of The Ministry Of Ecology And Natural Resources Of The Republic Of Kazakhstan
3. Definitions and concepts	
Definition	The indicator reflects temporary trends in the percentage of important sites for terrestrial and freshwater biodiversity (i.e. those that significantly contribute to the conservation of biodiversity at the global level) that are fully covered by certain protected areas.
Basic concepts:	The protection of important sites is essential to prevent the decline of biodiversity and ensure the long-term and sustainable use of terrestrial and freshwater natural resources. The establishment of protected areas is an important mechanism for achieving this goal, and this indicator serves as a means of measuring progress in the conservation, restoration and sustainable use of terrestrial and freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in accordance with obligations under international agreements. Levels of access to protected areas vary between management categories of protected areas. Some areas, such as scientific reserves, are preserved in their natural state and are closed for any other use. Others are used for recreation or tourism, or even open to sustainable extraction of natural resources. In addition to preserving biodiversity, protected areas have high social and economic value: support for local livelihoods; protection of watersheds from erosion; support for an incalculable wealth of genetic resources; support for a thriving recreation and tourism industry; conservation of ecosystems for scientific purposes, research and education, as well as the formation of foundations for cultural and other intangible values.
Justification and interpretation	Protected areas, as defined by the International Union for Conservation of Nature (IUCN; Dudley 2008), are clearly defined geographical areas that are recognized, allocated and managed through legal or other effective means to achieve long-term conservation of nature with appropriate natural resources and cultural values.
4. Data sources and collection methods	
Data sources	The source is the statistical form of the 1-Protected area report
Data collection methods	Reports provided by the State national nature parks, State nature reserves and State forest nature reserves
Unit of measurement	Percentage
Periodicity	Annual
5. Calculation method and other methodological considerations	

Calculation method:	The share of specially protected natural territories is calculated as a percentage of the total area of the country.
Comments and restrictions:	The use of specially protected natural territories and restrictions on their territories are determined by the Law of the Republic of Kazakhstan "On Specially Protected Natural territories" dated July 7, 2006 and by-laws and regulations.
6. Data availability and disaggregation	
Data availability and gaps:	General information is available on the website of the Committee of Forestry and Wildlife and its subordinate institutions. The form 1-Protected area is also available on the website of the Bureau of National Statistics.
The level of disaggregation:	The data is disaggregated by land categories, zoning, and the specifics of its limitations established by legislation in the field of specially protected natural areas.
7. Comparability with international data/standards	Discrepancies may exist between the indicator data among internationally represented countries, as the proportion of specially protected natural areas varies from country to country.
8. References and documentation	The 1-Protected area report form is available on the website of the Bureau of National Statistics.
