

1. Information about the indicator	
Goal	Protection, restoration of terrestrial ecosystems and promotion of their rational use, rational forest management, combating desertification, stopping and reversing the process of land degradation and ending the process of loss
Task	By 2030, ensure the conservation of mountain ecosystems, including their biodiversity, in order to enhance their ability to provide benefits necessary for sustainable development.
The indicator	Mountain forest area
2. Information about the organization	
Organization	Committee of Forestry And Wildlife of The Ministry Of Ecology And Natural Resources Of The Republic Of Kazakhstan
3. Definitions and concepts	
Definition	Specially protected natural territories can be created and expanded both at the expense of the lands of forest institutions that are put into operation by local executive bodies, and at the expense of reserve lands.
Basic concepts:	Forested area is the degree of forest cover of an area, determined by the ratio of forested land to its total area, expressed as a percentage. A forest quarter is a part of the territory of the forest fund, bordered on the ground by clearings, natural boundaries (river banks, mountain ranges, roads, and others), which serves to organize forestry. Specially protected natural area -areas of land, water bodies and airspace above them with natural complexes and objects of the state nature reserve fund, for which a special protection regime is established.
Justification and interpretation	The area of mountain forests is allocated on the territory of the state forest fund located in mountainous areas
4. Data sources and collection methods	
Data sources	Accounting of the forest fund, explanatory note to the forest management materials
Data collection methods	A separate statistical report on the area of mountain forests is not provided. Information on the areas of mountain forests is indicated in the explanatory note to the forest management materials in accordance with the instructions for conducting forest management on the territory of the state forest fund.
Unit of measurement	Thousand hectares
Periodicity	Annual
5. Calculation method and other methodological considerations	
Calculation method:	Calculations and formulas are not provided for the mountain forest area indicator. However, based on the accounting of the forest fund of environmental protection and forestry institutions, the state forestry organization represented by the RSE "Kazakh Forestry Enterprise" compiles information on the areas of mountain forests.
Comments and restrictions:	To achieve this indicator, it is necessary to follow articles 20.23 of the Law of the Republic of Kazakhstan "On Specially Protected Natural Territories" and other regulatory legal acts arising from legislation in the field of specially protected natural territories.

6. Data availability and disaggregation	
Data availability and gaps:	General information is available on the websites of the Ministry of Ecology and Natural Resources and its departments and subordinate institutions.
The level of disaggregation:	The data is disaggregated by the area of mountain forests, the category of lands and the specifics of their restrictions established by legislation in the field of specially protected natural areas.
7. Comparability with international data/standards	Differences may exist between the indicator data among countries presented internationally, since the area of mountain forests in each country is different
