

1. Information about the indicator	
Goal	Ensuring the availability and rational use of water resources and sanitation for all
Task	By 2030, improve water quality by reducing pollution, eliminating waste dumping and minimizing emissions of hazardous chemicals and materials, halving the proportion of untreated wastewater, and significantly increasing the recycling and safe reuse of wastewater worldwide.
The indicator	The share of wastewater treated by complete biological treatment (including post-treatment) in the total volume of wastewater discharged
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator includes all wastewater received and treated as a result of economic activity (atmospheric wastewater and industrial wastewater corresponding to the normatively purified without purification are not included).
Basic concepts:	The total volume of wastewater includes industrial, technical, economic and fecal wastewater, as well as water from municipal enterprises passed through wastewater disposal facilities during the reporting year. Biological treatment is the volume of wastewater discharged into reservoirs that is normatively treated at biological treatment facilities.
Justification and interpretation	Biological wastewater treatment removes 98% of pollutants. Biological wastewater treatment is a multi-stage procedure for removing potentially dangerous substances and reagents from waste water by decomposing them using specially grown bacteria and other protozoan (unicellular) organisms.
4. Data sources and collection methods	
Data sources	The data source for calculations is the results of national statistical observation in the form of a "Report on the work of enterprises operating water supply and (or) sanitation systems" (index form 1-VK, frequency - annual).
Data collection methods	Data collection is carried out on the basis of a comprehensive survey of all legal entities and (or) their structural and separate divisions, individual entrepreneurs with primary or secondary activities "Collection, treatment and distribution of water", "Collection and treatment of wastewater" according to the codes of the General Classifier of economic activities – 36, 37 (except 37.00.2 "Sewage disposal activity").
Unit of measurement	Percent
Periodicity	Annual
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated as the ratio of the volume of wastewater passed through biological treatment facilities (including post-treatment) to the total volume of wastewater generated, multiplied by 100.
Comments and restrictions:	

6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the official website of the Bureau of National Statistics. The results of the statistical observation are shown in the electronic table «On the operation of water supply and sanitation facilities in the Republic of Kazakhstan». The time series is from 2010.
The level of disaggregation:	At the country level, at the regional level.
7. Comparability with international data/standards	International with minor changes.
