

1. Information about the indicator	
Goal	Ensuring the transition to rational consumption and production models
Task	By 2020, achieve environmentally sound management of chemicals and all wastes throughout their entire life cycle in accordance with agreed international principles and significantly reduce their release into air, water and soil in order to minimize their negative impact on human health and the environment.
The indicator	Hazardous waste generation per capita
2. Information about the organization	
Organization	Ministry of Ecology and Natural Resources of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Determines the ratio of the amount of hazardous waste generated to the population in a country over a certain period.
Basic concepts:	Hazardous waste is waste that contains harmful substances with one or more dangerous properties (toxicity, explosion, radioactivity, fire hazard, high reactivity) and may pose an immediate or potential danger to the environment and human health independently or when coming into contact with other substances.; The hazard class of waste is determined according to the hazardous waste passport developed on the basis of the Waste Classifier
Justification and interpretation	The main purpose of the indicator is to provide a measurement of the pressure exerted on the environment and humans by the generated hazardous waste. Due to the content of dangerous substances, they pose a serious risk to the environment and human health if they are not handled and processed in a safe manner. For this reason, one of the most important areas of environmental protection is the rational organization of the waste management process of production and consumption. An important role in this process is played by economic incentives for the introduction of low-waste and non-waste technologies, waste recycling in order to neutralize and dispose of them.
4. Data sources and collection methods	
Data sources	The state cadastre of production and consumption waste. The state cadastre of production and consumption waste is maintained by the subordinate organization of the Ministry of Ecology and Natural Resources of the Republic of Kazakhstan – RSE na PHB "Information and Analytical Center for Environmental Protection". In accordance with Articles 152-155, 293-1 of the Environmental Code of the Republic of Kazakhstan, the state cadastre of production and consumption waste is implemented in the Unified Environmental Protection Information System (hereinafter – UIS OOS) and posted on the portal http://oos.energo.gov.kz
Data collection methods	Based on the collection of data in the form of departmental statistical observation "Waste Inventory Report" (Waste Inventory index-1, annual), approved by the Order of the Acting Minister of Energy of the Republic of Kazakhstan dated July 29, 2016 No. 352. The circle of persons representing the form: nature users and entities performing operations for the collection, removal, disposal, processing, storage, disposal or disposal of waste.

Unit of measurement	Tons per capita/kg per capita
Periodicity	Annually
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated as the ratio of the volume of waste generated from the production and consumption of the green, amber and red lists for the reporting year to the average annual population. Additionally, an indicator is calculated based on the volume of waste generated from the production and consumption of amber and red lists relative to the average annual population.
Comments and restrictions:	
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Republican State Enterprise on the right of economic management "Information and Analytical Center for Environmental Protection" of the Ministry of Ecology and Natural Resources of the Republic of Kazakhstan and the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	The data is disaggregated: - at the country level, - at the regional level.
7. Comparability with international data/standards	
8. References and documentation	On the Internet resource http://oos.energo.gov.kz
