

1. Information about the indicator	
Goal	Ensuring the transition to rational consumption and production models
Task	To recommend companies, especially large and multinational companies, to apply sustainable production methods and reflect information on the rational use of resources in their reports.
The indicator	The number of companies publishing reports on the rational use of resources
2. Information about the organization	
Organization	Ministry of Ecology and Natural Resources of the Republic of Kazakhstan, Ministry of Energy of the Republic of Kazakhstan, Ministry of Industry and Construction of the Republic of Kazakhstan, Ministry of Agriculture of the Republic of Kazakhstan, LEB, Agency of the Republic of Kazakhstan for Regulation and Development of the Financial Market
3. Definitions and concepts	
Definition	Environment, Social, Governance, (hereinafter referred to as ESG) is a set of non-financial factors that are used to assess the long-term sustainability of a company and its impact on society and the environment. For the purposes of this indicator, "sustainability reports" will not be limited to individual sustainability reports that are compiled by companies, but will be considered as "sustainability information" and will extend, among other things, to other forms of presenting information on sustainable development, such as publishing information on sustainable development as part of the company's annual reports or providing information on sustainable development to the national Government. Not every report called the "Sustainability Report" will be counted as an indicator. To do this, they will have to comply with the "minimum requirements" regarding the disclosure of sustainability information (according to the methodology for determining SDGs 12.6.1.). Disclosure of information in the field of climate and sustainable development and for all financial institutions using IFRS standards, in accordance with the Guidelines on Climate and Sustainable Development, European Standards ESRS (European Sustainability Reporting Standards) and CSRD (Corporate Sustainability Reporting Directive (European Union Directive on Corporate Sustainability Reporting)) to ensure comparability of national reporting with international requirements
Basic concepts:	To account for this indicator, companies must publish information that meets the "minimum disclosure requirements" according to the methodology for determining SDGs 12.6.1. The minimum disclosure requirements are consistent with existing reporting systems, including the IIRC reporting framework, the Global Reporting Initiative (GRI), and the Sustainability Accounting Standards Board (SASB). Environment, Social, Governance (ESG) is an approach to the assessment and management of a company's activities in three blocks: Environment (ecology) – how the company affects the

	environment: greenhouse gas emissions, energy efficiency, waste management; Social (social responsibility) – how the company interacts with people (working conditions and occupational safety, staff training and development); Social (social responsibility) – how the company interacts with people (working conditions and occupational safety, staff training and development); Indicators on climate and social risks, including industry exposure, insurance losses, access to finance, financial literacy, cybersecurity, consumer protection, as well as the role of boards of directors and gender KPIs are consolidated in accordance with the four blocks of the TCFD (TaskForceonClimate-relatedFinancialDisclosures (Working Group on Financial Disclosure Related to Climate Change, at The Financial Stability Board))
Justification and interpretation	The concept for the transition of the Republic of Kazakhstan to a "green" economy sets the task of forming an ecological culture of the population and business by increasing the share of "TOP-50" companies publishing reports on the rational use of resources (ESG). The MENR of the Republic of Kazakhstan annually collects information on the publication of reports of polluting enterprises included in the "TOP 50", publishing reports on sustainable development, corporate governance, social responsibility and environmental protection in accordance with international standards and the methodology of SDG 12.6.1. ESG information will be disclosed by the following financial institutions: listed companies, second-tier banks, insurance companies, and professional securities market participants
4. Data sources and collection methods	
Data sources	Internet resources, companies included in the "TOP 50", approved by the Decree of the Government of the Republic of Kazakhstan dated April 1, 2022 No. 187. Departmental data of the Agency of the Republic of Kazakhstan for Regulation and Development of the Financial Market
Data collection methods	Conducting a survey among the "TOP-50" enterprises (MENR RK). Conducting a survey among financial institutions (ARFR)
Unit of measurement	unit, percentage
Periodicity	annually
5. Calculation method and other methodological considerations	
Calculation method:	Companies will be counted in the indicator if they publish information on sustainable development in accordance with the minimum and advanced requirements specified in the methodology of SDG 12.6.1. Financial organizations use the ESG Disclosure Guidelines for Banks and Other Financial Organizations in order to ensure the availability and quality of ESG information in the financial market. The guidelines were approved in April 2023.
Comments and restrictions:	

6. Data availability and disaggregation	
Data availability and gaps:	The data is available: - on the website of the MENR RK, - on the website of the BNS ASPR RK
The level of disaggregation:	The data is disaggregated at the country level. The data is provided in the context of: 1) TOP 50 companies: - the number of "TOP 50" companies publishing reports on the rational use of resources; - the share of "TOP 50" companies publishing reports on the rational use of resources (ESG). 2) financial organizations: - listed companies; - second-tier banks; - insurance companies; - professional participants of the securities market
7. Comparability with international data/standards
