

1. Information about the indicator	
Goal	Protection, restoration of terrestrial ecosystems and promotion of their rational use, rational forest management, combating desertification, stopping and reversing the process of land degradation and ending the process of loss
Task	Promote the equitable distribution of benefits from the use of genetic resources and promote adequate access to such resources on internationally agreed terms
The indicator	Plant genetic resources for the conservation of biodiversity, including genetic resources for agriculture and food production.
2. Information about the organization	
Organization	Committee of Forestry And Wildlife of The Ministry Of Ecology And Natural Resources Of The Republic Of Kazakhstan
3. Definitions and concepts	
Definition	Indicator 15.6.1 directly measures the progress made by countries in establishing legislative, administrative or policy frameworks for access to genetic resources and benefit-sharing.
Basic concepts:	In particular, the Nagoya Protocol stipulates that Parties should take legislative, administrative or policy measures, as appropriate, to ensure that the benefits of using genetic resources are shared on a fair and equitable basis, including with respect to genetic resources maintained by indigenous communities and the benefits associated with the use of Traditional Knowledge related to with genetic resources.
Justification and interpretation	The Nagoya Protocol, which should be in force, requires compliance with certain favorable conditions at the national level for its effective implementation. In particular, countries are required, depending on their specific circumstances, to review legislative, administrative or policy measures that already exist or to develop new measures in order to meet the obligations set out in the Protocol.
4. Data sources and collection methods	
Data sources	National gene banks, seed collection, breeding and breeding registries
Data collection methods	The data is generated based on monitoring, inventory, and scientific data.
Unit of measurement	Unit
Periodicity	Annual
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is defined as the number of countries that have adopted legislative, administrative and policy mechanisms to ensure fair and equitable benefit-sharing, starting with the adoption of the Nagoya Protocol on Access to Genetic Resources and Fair and Equitable Benefit-sharing, completed by the Convention on Biological Diversity (2010).
Comments and restrictions:	The indicator can be used to measure progress in the adoption of a legislative, administrative and policy framework for Facilitating Access to Genetic Resources and the Fair and Equitable sharing of benefits over time.
6. Data availability and disaggregation	
Data availability and gaps:	The data is provided by scientific institutions, botanical gardens and other specialized organizations, or through scientific publications.

The level of disaggregation:	The data is generated at the country level
7. Comparability with international data/standards	Discrepancies may exist between the indicator data among countries presented internationally.
