

1. Information about the indicator	
Goal	Ensure healthy lives and promote well-being for all at all ages
Task	By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes
The indicator	Adolescent birth rate (aged 10 to 14 years; aged 15 to 19 years) per 1,000 women in that age group in that age group
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Determines the level of adolescent fertility (teenage birth rate).
Basic concepts:	Reproductive period (age) is the period of time during which a woman is capable of childbearing. For statistical purposes, most countries conventionally define this period as 15–49 years.
Justification and interpretation	Age-specific fertility rates characterize the average level of fertility in each age group during a calendar year. When calculating the rate for the under-20 age group, the denominator is the number of women aged 15–19. When calculating the rate for the 15–49 age group, the numerator includes all live births, including those born to mothers under the age of 15 and aged 50 and older. $ASFR_x = \frac{N_x}{P_x} * 1000,$ where: ASFR_x – the age-specific fertility rate, where x is the age; N_x – the number of children born to women aged x; P_x – the mid-year population of women aged x.
4. Data sources and collection methods	
Data sources	Electronic data from the Information Systems 'ZAGS' (Civil Status Acts Registration) of the Ministry of Justice and the 'Attached Population Register' of the Ministry of Healthcare of the Republic of Kazakhstan.
Data collection methods	Medical birth and death certificates are transmitted to the ZAGS IS of the Ministry of Justice of the Republic of Kazakhstan online and subsequently enter the 'Population Statistical Register' Information System of the Bureau of National Statistics of the Republic of Kazakhstan.
Unit of measure ment	Per 1,000 population
Periodicity	Monthly
5. Calculation method and other methodological considerations	
Calculation method:	The ratio of the number of births among adolescents (aged 10 to 14 and aged 15 to 19) to the number of women in the corresponding age group.
Comments and restrictions:	
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the

	Republic of Kazakhstan.
The level of disaggregation:	The data is disaggregated by sex and geographical location.
7. Comparability with international data/standards	Yes, it complies with international standards.
