

1. Information about the indicator	
Goal	Ensuring the openness, safety, vitality and environmental sustainability of cities and towns
Task	By 2030, reduce the negative environmental impact of cities per capita, including through a special impact on air quality and the disposal of urban and other waste.
The indicator	The proportion of landfills that meet environmental requirements and sanitary standards
2. Information about the organization	
Organization	Ministry of Ecology and Natural Resources of the Republic of Kazakhstan, Local executive bodies
3. Definitions and concepts	
Definition	The place of waste disposal was a place of great permanent kneading without intent. Waste disposal is carried out at specially equipped landfills.
Basic concepts:	Consumer waste is the remains of products, wares and other objects formed in the process of great consumption or exploitation, as well as goods (products) that lose their full or partial initial consumer properties. Hazardous waste is waste that contains harmful substances with separate or several dangerous properties (toxicity, explosion, radioactivity, fire hazard, high reactivity) and may pose an immediate or potential danger to the environment and human health independently or when coming into contact with other creatures.
Justification and interpretation	Chapter 43 of the Environmental Code of the Republic of Kazakhstan. Decree of the President of the Republic of Kazakhstan dated May 30, 2013 No. 577 "On the Concept of transition of the Republic of Kazakhstan to a «green economy».
4. Data sources and collection methods	
Data sources	The source is data from the local executive authorities of Astana, Shymkent, Almaty and the region.
Data collection methods	Official summons to local executive authorities
Unit of measure ment	Percent
Periodicity	Quarterly
5. Calculation method and other methodological considerations	
Calculation method:	The proportion of landfills of solid household waste (MSW) that meet the requirements of sanitary regulations is calculated as follows: 1. The number of landfills and landfills by region is determined by the formula: $N_n = N_1 + N_2 + N_3 + \dots + N_i$ где, N_n - number of landfills and landfills by region, $N_1+N_2+N_3+N_i$ - the number of landfills and landfills in each locality of the region (region, city),

	2. The number of polygons meeting the environmental and sanitary requirements for them by region is determined using the following formula: $N_{yo} = N_n - N_x$ where, N_{yo} – a general meeting of landfills and landfills with relevant environmental and sanitary requirements and standards, with design and permits by region, N_n – number of landfills and landfills in the region, N_x – the number of landfills and landfills in the region that do not meet environmental and sanitary requirements and standards, and do not have the appropriate design and permits. 3. The total number of landfills and landfills in the republic is determined using the formula: $N_{total} = N_{n1} + N_{n2} + N_{n3} + \dots + N_{ni}$ where, N_{total} – total number of landfills and landfills in the republic, $N_{n1}, N_{n2}, N_{n3}, N_{ni}$ - number of landfills and landfills by region 4. The total number of landfills and landfills in the republic that meet environmental and sanitary requirements and standards with design and permits is determined using the formula: $N_{yo.total} = N_{yo1} + N_{yo2} + N_{yo3} + \dots + N_{yoi},$ where, $N_{yo.total}$ – a general meeting of landfills and landfills with relevant environmental and sanitary requirements and standards, which have design and permits for the Republic of Buryatia, $N_{yo1}, N_{yo2}, N_{yo3}, N_{yoi}$ – number of landfills and landfills in the region, N_x – the number of landfills and landfills in the Republic of Buryatia that do not meet environmental and sanitary requirements and standards, do not have the appropriate design and permits, 5. The calculation of the number of landfills meeting the requirements of sanitary regulations (from the total number of burial sites) is calculated as follows: $N_{dol} = N_{yo.total} \times 100 / N_{total},$ where, N_{dol} - the number of landfills that meet the requirements of sanitary regulations, $N_{yo.total}$ - a general meeting of landfills and landfills with relevant environmental and sanitary requirements and standards, which have design and permits for the Republic of Buryatia, N_{total} - the total number of landfills and landfills in the republic.
Comments and restrictions:	-
6. Data availability and disaggregation	

Data availability and gaps:	These results are available on the website of the Ministry of Ecology and Natural Resources of the Republic of Kazakhstan.
The level of disaggregation:	The data are disaggregated by geographical location
7. Comparability with international data/standards	
8. References and documentation	https://www.gov.kz/memleket/entities/ecogeo/documents/details/791381?lang=ru
