

1. Information about the indicator	
Goal	End hunger, achieve food security and improved nutrition and promote sustainable agriculture
Task	By 2030, double the agricultural productivity and incomes of small-scale food producers, in particular women, indigenous peoples, family farmers, pastoralists and fishers, including through secure and equal access to land, other productive resources and inputs, knowledge, financial services, markets and opportunities for value addition and non-farm employment
The indicator	Volume of production per labour unit by classes of farming/pastoral/forestry enterprise size
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Labor productivity is an indicator of production efficiency that characterizes output per unit of resources used, representing the ratio of production volume and labor costs.
Basic concepts:	Labor productivity (PT, gross value added (GVA))
Justification and interpretation	Gross value added (GVA) is the final result of production activities and represents the value added by processing in a given production process. It is calculated at the industry level as the difference between the output of goods and services and intermediate consumption, and includes the cost of fixed capital consumed in the production process. Labor productivity is calculated as the ratio of the industry's GVA to the number of employees. Depending on the goals, the denominator uses an indicator of labor costs – the number of hours worked and labor productivity is calculated not per employee, but per hour of time worked. The number of employed people includes employees and self-employed workers.
4. Data sources and collection methods	
Data sources Data	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
collection methods	Statistical surveys and administrative data
Unit of measurement	thousand tenge
Periodicity	annually
5. Calculation method and other methodological considerations	

Calculation method:	Labor productivity in agriculture= GVA in agriculture/ number of employed people in agriculture.
Comments and restrictions:	-
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureaucratic Statistics Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	No disaggregation is required for this indicator.
7. Comparability with international data/standards	Calculations of GDP indicators comply with international standards. The 2008 SNA prepared by the International Monetary Fund, the Organization for Economic Cooperation and Development, the Statistical Office of the European Communities, the United Nations and the World Bank was used as a methodological basis.
