

1. Information about the indicator	
Goal	Promoting sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
Task	Support per capita economic growth in accordance with national circumstances and, in particular, gross domestic product growth of at least 7 percent per year in the least developed countries
The indicator	Annual growth rate of real GDP per capita
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The real gross domestic product (GDP) per capita is an indicator of the average standard of living of the inhabitants of a country or area. A positive percentage change in annual real GDP per capita can be interpreted as an increase in the average standard of living of residents in a country or area.
Basic concepts:	Gross domestic product (GDP), GDP per capita
Justification and interpretation	GDP is the sum of the gross value added of all resident producer units plus a portion (possibly the total amount) of taxes on products, minus subsidies on products that are not included in the production volume estimate. The annual growth rate of real gross domestic product (GDP) per capita is calculated as a percentage change in real GDP per capita over two consecutive years. Real GDP per capita is calculated by dividing GDP in constant prices by the population of a country or area. Data for real GDP measured in constant prices (in US dollars) to facilitate the calculation of a country's growth rate and the aggregation of data by country.
4. Data sources and collection methods	
Data sources	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
Data collection methods	Statistical surveys
Unit of measurement	Percent
Periodicity	Annually
5. Calculation method and other methodological considerations	
Calculation method:	The annual growth rate of real gross domestic product (GDP) per capita is calculated as follows: - Conversion of annual real GDP in national currency at 2005 prices for a country or region into US dollars at 2005 prices using 2005 exchange rates. - Divide the result by the population of the country or area to get the annual real GDP per capita in constant US dollars at 2005 prices.

	c. Calculate the annual growth rate of real GDP per capita per year $t + 1$ using the following formula: $[(G(t + 1) - G(t)) / G(t)] \times 100\%$ Where $G(t + 1)$ - real GDP per capita in 2005 in US dollars per year $t + 1$ и $G(t)$ - real GDP per capita in 2005 in US dollars per year t.
Comments and restrictions:	-
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	-
7. Comparability with international data/standards	Calculations of GDP indicators comply with international standards. The 2008 SNA prepared by the International Monetary Fund, the Organization for Economic Cooperation and Development, the Statistical Office of the European Communities, the United Nations and the World Bank was used as a methodological basis.
