

1. Information about the indicator	
Goal	Development and modernization of energy infrastructure and technologies in the Republic of Kazakhstan, including through the introduction of energy management systems.
Task	By 2030, increase the share of enterprises implementing energy management systems, as well as ensure the modernization of energy infrastructure and technologies to achieve modern, sustainable and energy-efficient energy supply, taking into account national priorities and development programs.
The indicator	The share of enterprises implementing the energy management system
2. Information about the organization	
Organization	Ministry of Industry and Construction of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Energy management is a set of administrative actions aimed at ensuring rational consumption of energy resources and improving the energy efficiency of a management facility, including the development and implementation of energy conservation and energy efficiency policies, action plans, procedures and methods for monitoring, evaluating energy consumption and other actions aimed at improving energy efficiency.
Basic concepts:	Energy resources are a set of natural and produced energy carriers, the stored energy of which is currently being used or may be used in the future in economic and other types of activities, as well as types of energy (atomic, electrical, chemical, electromagnetic, thermal and other types of energy); Efficient use of energy resources is the achievement of a technically feasible and economically justified level of use of energy resources.; Energy efficiency is the consumption of energy resources per unit of production.
Justification and interpretation	Reducing the energy intensity of Kazakhstan's GDP by at least 25% by 2025 and at least twice by 2050 (from 2008 levels). The way to achieve these goals is to implement measures in the field of energy conservation and energy efficiency improvement.
4. Data sources and collection methods	
Data sources	Form 3 for the subjects of the SER according to the Rules of formation and maintenance of the SER Order of the Minister of Investment and Development of the Republic of Kazakhstan dated March 31, 2015 No. 387. Registered with the Ministry of Justice of the Republic of Kazakhstan on July 22, 2015 No. 11728.
Data collection methods	Every year, by April 1, information is provided to the national Institute on paper and electronic media. Currently, through AIS SER (Automated Information System State Energy Register).
Unit of measurement	Percent
Periodicity	Annually
5. Calculation method and other methodological considerations	

Calculation method:	The indicator is calculated as the ratio of the number of enterprises of the Republic of Kazakhstan that have implemented energy management systems to the total number of enterprises to be accounted for, expressed as a percentage. The calculation includes enterprises with ISO 50001 certification or documented functioning of the energy management system. The calculation is carried out on an annual basis according to the SER data.
Comments and restrictions:	-
6. Data availability and disaggregation	
Data availability and gaps:	The results of the formation and management of the SER are available to users on the official website of the National Institute.
The level of disaggregation:	The subjects of the SER are represented by regions, cities, districts and villages. In addition, they are divided by forms of ownership (GA, KV, LE, IE) and by GCEA
7. Comparability with international data/standards	-
