

1. Information about the indicator	
Goal	Building resilient infrastructure, promoting inclusive and sustainable industrialization and innovation
Task	Develop high-quality, reliable, sustainable and resilient infrastructure, including regional and cross-border infrastructure, to support economic development and human well-being, with a particular focus on ensuring affordable and equitable access for all
The indicator	Volume of passenger and freight traffic by type of transport
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator is defined as the total number of passengers transported and cargo transported in tons by all modes of transport.
Basic concepts:	Transported passengers – the number of passengers transported over a certain period of time. The unit of observation in passenger transportation statistics is a passenger trip. Transported cargo – the amount of cargo in tons transported by transport.
Justification and interpretation	To develop high-quality, reliable, sustainable regional and international infrastructure, focusing on equal access for all to this infrastructure, in order to promote economic development and improve human well-being. The development of international infrastructure is most necessary for passenger and freight transportation carried out by the Member States. The growth in passenger and freight traffic shows the sustainable development of infrastructure in the Member States, along with the ultimate socio-economic benefits.
4. Data sources and collection methods	
Data sources	The source is the statistical data of the forms: 1-Transport "Transport Operation Report", 2-transport "Report on the operation of transport by type of message"
Data collection methods	Primary statistical data of the respondents.
Unit of measurement	Thousands of passengers were transported. Thousands of tons of cargo were transported.
Periodicity	monthly
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated as the total number of passengers transported, goods transported by type of transport according to statistical reports.
Comments and restrictions:	-

6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the official website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	The data is disaggregated by mode of transport.
7. Comparability with international data/standards	-
8. References and documentation	-
