

1. Information about the indicator	
Goal	Building resilient infrastructure, promoting inclusive and sustainable industrialization and innovation
Task	Promote inclusive and sustainable industrialization and, by 2030, significantly increase industrial employment and the share of industrial production in gross domestic product in accordance with national circumstances and double the corresponding figures in the least developed countries
The indicator	Labor productivity growth in the manufacturing industry
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Labor productivity is an indicator of production efficiency that characterizes output per unit of resources used, representing the ratio of production volume and labor costs.
Basic concepts:	Labor productivity (LP), gross value added (GVA), labor productivity index (LPI)
Justification and interpretation	Gross value added (GVA) is the final result of production activities and represents the value added by processing in a given production process. It is calculated at the industry level as the difference between the output of goods and services and intermediate consumption, and includes the cost of fixed capital consumed in the production process. Labor productivity is calculated as the ratio of the industry's GVA to the number of employees. Depending on the goals, the denominator uses an indicator of labor costs – the number of hours worked and labor productivity is calculated not per employee, but per hour of time worked. The number of employed people includes employees and self-employed workers.
4. Data sources and collection methods	
Data sources	Statistics of national accounts, labor and employment statistics.
Data collection methods	Statistical surveys and administrative data.
Unit of measurement	Percentage compared to the previous year
Periodicity	Annually
5. Calculation method and other methodological considerations	
Calculation method:	$\text{IPT of the manufacturing industry} = \frac{\text{IFO GVA of the manufacturing industry}}{\text{Change in the CHZN of the manufacturing industry}}$
Comments and restrictions:	-
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and

	Reforms of the Republic of Kazakhstan.
The level of disaggregation:	The Republic of Kazakhstan, regions.
7. Comparability with international data/standards	Calculations of GDP indicators comply with international standards. The 2008 SNA prepared by the International Monetary Fund, the Organization for Economic Cooperation and Development, the Statistical Office of the European Communities, the United Nations and the World Bank was used as a methodological basis.
