

1. Information about the indicator	
Goal	Building resilient infrastructure, promoting inclusive and sustainable industrialization and innovation
Task	Step up scientific research and build the technological potential of industrial sectors in all countries, especially developing countries, including by stimulating innovation by 2030 and significantly increasing the number of employees in the field of research and development (R&D) per 1 million people, as well as public and private R&D spending
The indicator	Domestic R&D expenditures as a percentage of GDP
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Domestic R&D expenditures as a percentage of gross domestic product (GDP) This is the main indicator reflecting the dynamics of scientific and technological development of the state.
Basic concepts:	Scientific research is work related to scientific research, conducting research, experiments in order to expand existing and obtain new knowledge, test scientific hypotheses, establish patterns of development of nature and society, scientific generalization, scientific justification of projects; Development work is a complex of works performed during the creation or modernization of products, the development of design and technological documentation for prototypes, the manufacture and testing of prototypes and utility models.; Internal R&D costs represent the amount of research and development costs performed internally during the reporting year and consist of current and capital expenditures.
Justification and interpretation	The indicator is a direct measurement of the R&D costs mentioned in the task.
4. Data sources and collection methods	
Data sources	The source is statistical data of the form 1-science "Report on research and development work".
Data collection methods	The primary data of the respondents are formed on the basis of the general government statistical observation 1-science "Report on research and development work".
Unit of measure ment	Percent
Periodicity	Annually
5. Calculation method and other methodological considerations	
Calculation method:	Internal R&D costs as a percentage of GDP are calculated using the following formula: $DE_{gdp} = DE / GDP * 100$ where, DE_{gdp} is the share of internal R&D costs to GDP; DE is internal R&D costs; GDP is gross domestic product.
Comments and restrictions:	
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.

The level of disaggregation:	The Republic of Kazakhstan, regions.
7. Comparability with international data/standards	-
8. References and documentation
