

1. Information about the indicator	
Goal	Reducing inequality within and between countries
Task	By 2030, we will gradually achieve and maintain income growth of the least affluent 40 percent of the population at a level higher than the national average.
The indicator	The growth rate of household spending or per capita income among the least affluent 40 percent of the population and among the general population
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The growth rate of income per capita of the least affluent 40 percent of the population is a trend in income used for consumption per capita of the least affluent 40 percent of the population.
Basic concepts:	The promotion of shared prosperity is defined as stimulating income growth in the bottom 40 percent of the wealth distribution in each country and is measured by calculating the average annual growth in average real income per capita or consumption in the bottom 40 percent.
Justification and interpretation	Improving overall well-being requires both economic growth and equity. Shared Prosperity recognizes that while growth is necessary to improve economic well-being in a society, progress is measured by how these benefits are shared among its poorest members. The decision to measure overall well-being based on income or consumption was not made to ignore many other aspects of well-being. It is driven by the need for an indicator that is easy to understand, communicate, and measure.
4. Data sources and collection methods	
Data sources	Household budget survey
Data collection methods	Household budget survey
Unit of measurement	Percent
Periodicity	annual
5. Calculation method and other methodological considerations	
Calculation method:	The income growth rate of the least affluent 40% of the population is calculated as the average annual growth rate of real consumption per capita or income of the bottom 40% of the income distribution in the country based on a survey of household budgets.
Comments and restrictions:	
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	Across the republic
