

1. Information about the indicator	
Goal	Promoting sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
Task	By 2020, develop and put into effect a global youth employment strategy and implement the Global Jobs Pact of the International Labour Organization
The indicator	The proportion of young people employed in permanent jobs among those who applied to career centers.
2. Information about the organization	
Organization	Ministry of Labor and Social Protection of the Population of the Republic of Kazakhstan, Local executive bodies
3. Definitions and concepts	
Definition	The indicator is defined as the number of employed young people divided by the total number of young people who applied to career centers.
Basic concepts:	Young people are citizens of the Republic of Kazakhstan from fourteen to thirty-five years old. Working youth are citizens of the Republic of Kazakhstan who have not reached the age of thirty-five, who have mastered the educational curricula of secondary schools and (or) organizations of technical and vocational and (or) post-secondary, and (or) higher, and (or) postgraduate education and are engaged in labor activity. (Source: Law of the Republic of Kazakhstan «On State Youth Policy» dated February 9, 2015 No. 285-V LRK.)
Justification and interpretation	In Kazakhstan, by 2030, the annual influx of young people into the labor market will amount to over 300,000 people due to the demographic growth of the 2000s. The first wave of the "baby boom" with general secondary and secondary vocational education is already reaching the labor market, and in 2026 they will begin to arrive with higher education. In this regard, it is necessary to provide young people with access to vacant employer vacancies, assistance in their employment, especially for young people of the NEET category, career counseling and early career development. Thus, monitoring of this indicator will make it possible to identify the effectiveness/inefficiency of employment promotion measures in order to improve them in the future.
4. Data sources and collection methods	
Data sources	Source of information: automated information system "Labor Market" of JSC "CRTR", report "Information on those who participated in active measures to promote employment by target groups.
Data collection methods	Data is collected through the automated information system "Labor Market", represented by the departments for the coordination of employment and social programs of the akimats of the regions, the Department of Employment and Social Programs of Almaty, the departments of employment and social protection of Astana and Shymkent cities.

Unit of measurement	Percent
Periodicity	Monthly, by the 15th day of the month following the reporting period.
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated as the total number of young people employed in the current year divided by the total number of people who applied to career centers in the same year.
Comments and restrictions:	The data does not cover the number of self-employed young people.
6. Data availability and disaggregation	
Data availability and gaps:	The reporting form is available on the Ministry's website.
The level of disaggregation:	The data is disaggregated by region
7. Comparability with international data/standards	Discrepancies may exist between the calculations of countries and those presented internationally, as national data may relate to the national definition of youth. There is no generally accepted international definition of the youth age group. However, for statistical purposes, the United Nations, without prejudice to any other definitions given by Member States, defines "youth" as persons between the ages of 15 and 24, but in Kazakhstan, youth are considered to be persons between the ages of 14 and 35. In this regard, statistics on youth employment may vary from country to country.
