

1. Information about the indicator	
Goal	Ensuring the openness, safety, vitality and environmental sustainability of cities and towns
Task	By 2030, reduce the negative environmental impact of cities per capita, including through a special impact on air quality and the disposal of urban and other waste.
The indicator	Providing the population with conditions for the collection and removal of waste
2. Information about the organization	
Organization	Ministry of Ecology and Natural Resources of the Republic of Kazakhstan, Local executive bodies
3. Definitions and concepts	
Definition	Waste collection is the reception or premise of waste from individuals and legal entities for the purpose of long-range use, disposal, transportation, and disposal of waste.
Basic concepts:	Consumer waste is the remains of products, wares and other objects formed in the process of great consumption or exploitation, as well as goods (products) that lose their full or partial initial consumer properties. Solid household waste is municipal waste in solid form. Waste management - types of waste-related activities, including prevention and minimization of waste generation, accounting and control, accumulation of waste, as well as collection, processing, disposal, neutralization, transportation, storage (warehousing) and disposal of waste.
Justification and interpretation	Article 292 of the Environmental Code of the Republic of Kazakhstan
4. Data sources and collection methods	
Data sources	The source is data from the local executive authorities of Astana, Shymkent, Almaty and the region.
Data collection methods	Official summons to local executive authorities
Unit of measurement	Percent
Periodicity	Quarterly
5. Calculation method and other methodological considerations	
Calculation method:	The number of inhabitants of settlements (cities and agglomerations) with a population of more than 200,000 people by region is calculated using the formula: $Ann = An1 + An2 + An3 + \dots + Ani$ где, Ann - the total number of inhabitants of settlements (cities and agglomerations) with a population of more than 200,000 people in the republic, An1, An2, An3, Ani - the number of localities (cities and agglomerations) with a population of more than 200,000 people by region. 2. The number of residents of localities covered by the company's garbage transportation conditions is determined using the formula: $Cnn = Cn1 + Cn2 + Cn3 + \dots + Cni$

	где, Cnn - the number of residents of localities covered by the conditions of garbage collection companies, Cn1, Cn2, Cn3, Cni - covered by garbage collection companies by region. 3. The coverage of the population of the Republic of Kazakhstan with waste collection and transportation conditions (cities and agglomerations with a population of more than 200,000 people) is calculated using the formula: $B \text{ Coverage} = Cnn \times 100 / Ann$ where, coverage - coverage of the population of the Republic of Kazakhstan with waste collection and transportation services, Cnn - the number of residents of localities covered by the conditions of garbage collection companies, Ann - the total number of settlements.
Comments and restrictions:	-
6. Data availability and disaggregation	
Data availability and gaps:	These results are available on the website of the Ministry of Ecology and Natural Resources of the Republic of Kazakhstan.
The level of disaggregation:	The data are disaggregated by geographical location
7. Comparability with international data/standards
