

1. Information about the indicator	
Goal	Promoting sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
Task	Strengthen the capacity of national financial institutions to promote and expand access to banking, insurance and financial services for all
The indicator	The number of a) commercial bank branches per 100,000 adults and b) ATMs per 100,000 adults
2. Information about the organization	
Organization	Agency of the Republic of Kazakhstan for Regulation and Development of the Financial Market, National Bank of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	Commercial bank branches for 100,000 adults; Number of ATMs per 100,000 adults
Basic concepts:	A bank branch is a separate subdivision of the bank, which is not a legal entity, located outside the bank's location, carries out banking activities on behalf of the bank and acts within the powers granted to it by the bank. An ATM (electronic terminal) is an electronic and mechanical device designed for making payments and (or) money transfers or operations for accepting and (or) issuing cash, or for carrying out exchange operations with foreign currency, or for carrying out other types of operations, as well as the formation of appropriate supporting documents.
Justification and interpretation	The availability of financial services and their use is an integral part of modern society. Services such as savings, insurance, money payments and transfers, as well as loans, allow people to manage their lives, plan and pay for expenses, grow their businesses and improve their overall well-being. As banks remain one of the key institutions for access to formal financial services, the availability of an accessible banking infrastructure is an important starting point for access to financial services and, consequently, their use. The bank's branches are complemented by other important access points, such as ATMs of all official financial institutions that can provide financial services in remote locations.
4. Data sources and collection methods	
Data sources	Agency of the Republic of Kazakhstan for Regulation and Development of the Financial Market, National Bank of the Republic of Kazakhstan
Data collection methods	Downloading data on the number of branches from the AIP "Banking Activity" information system. The number of ATMs according to the NBRK, data unloading from the AIP "FRSP" information system. The number of the adult population of the Republic of Kazakhstan according to the BNS.
Unit of measurement	Branches for 100,000 adults; ATMs per 100,000 adults
Periodicity	As branches are registered; monthly
5. Calculation method and other methodological considerations	

Calculation method:	The number of commercial bank branches per 100,000 adults is calculated as the number of commercial bank branches per year. To make the indicator comparable, it is calculated per 100,000 adults in the relevant country. The number of ATMs per 100,000 adults is calculated as the number of ATMs in a country by banks, organizations engaged in certain types of banking operations, and payment organizations. To make the indicator comparable, it is calculated per 100,000 adults in the relevant country.
Comments and restrictions:	Since 2009, the Financial Services Accessibility Survey (FAS - FinancialAccessSurvey) has been collecting information on an annual basis from administrative data sources. Since its launch, 189 countries have contributed to the FAS, which currently contains more than 150 data series on the availability of financial services covering the periods 2004-2016.
6. Data availability and disaggregation	
Data availability and gaps:	The information is publicly available and is posted on the official Internet resource of the Agency of the Republic of Kazakhstan for Regulation and Development of the Financial Market and the National Bank of the Republic of Kazakhstan.
The level of disaggregation:	Aggregates on the number of branches are compiled by region and by commercial banks.
7. Comparability with international data/standards	The FAS is an administrative database that includes information received from central banks or other major financial regulatory authorities. Data collection is carried out centrally in the regulatory agency, which compiles the available data of financial institutions and financial service providers. The regulatory agency reports aggregated data on the overall economy as part of the FAS survey. The FAS survey provides metadata at the country level that explains the institutional coverage of each reporting economy. Every year, the FAS group asks FAS respondents to start an annual survey. Data is collected by countries and sent to the IMF through an Integrated Collection System (ICS), which ensures the secure presentation of information about the country. The data is processed and verified by the FAS team. Each data submission is carefully reviewed and, when necessary, the FAS team works with the country authorities to refine or adjust the data provided. If a country needs to add relevant information related to the submitted data, they can do so through the metadata portal in ICS. The FAS survey data may differ from that of an authorized government agency as a result of possible differences in coverage, objectives, or definitions of concepts.
