

1. Information about the indicator	
Goal	Achieve gender equality and empower all women and girls
Task	Ensure women's full and effective participation and equal opportunities for leadership at all levels of decision-making in political, economic and public life
The indicator	Proportion of women in managerial positions
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator is defined as the ratio of the number of employed women in managerial positions to the total number of employed persons in managerial positions, expressed as a percentage.
Basic concepts:	An employed person is an individual who carries out activities for remuneration or generates income through the use of property, the production and sale of goods, the performance of work, or the provision of services.
Justification and interpretation	Employed population - all persons of a corresponding age who, according to their status during a specific short reference period of one week, can be classified into one of the following categories: a) paid employee; b) self-employed worker.
4. Data sources and collection methods	
Data sources	The source is statistical data from Form T-001, 'Sample Population Employment Survey Questionnaire'
Data collection methods	Members of households aged 15 years and older are surveyed.
Unit of measurement	Percent
Periodicity	Quarterly, annual
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated as the ratio of the number of employed women in managerial positions surveyed in the current year to the total number of employed persons in managerial positions surveyed in the current year, expressed as a percentage.
Comments and restrictions:	Indicators are generated at the regional level.
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan.
The level of disaggregation:	The data is disaggregated by sex, age, type of locality, education level, occupational classifier, and KATO (Classifier of Administrative-Territorial Objects).
7. Comparability with international data/standards	The indicators are formed based on the results of a sample survey using an expanded household network (4.8% of the total number of households); the survey frequency is once a year. The lists of households are formed on the basis of the Housing Stock Register of

	the Republic of Kazakhstan. Concepts and definitions are provided in accordance with the standards and methodological approaches of the International Labour Organization (ILO).
