

1. Information about the indicator	
Goal	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development
Task	Strengthen domestic resource mobilization, including through international support to developing countries, to improve domestic capacity for tax and other revenue collection
The indicator	Total government revenue as a percentage of GDP by source
2. Information about the organization	
Organization	Department of Tax and Customs Legislation of the Ministry of Finance of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator is defined as the total amount of tax revenues in government revenues to GDP as a percentage.
Basic concepts:	Budget revenues are tax and non-tax revenues, proceeds from the sale of fixed assets, and transfers. Tax revenues are all types of taxes that are mandatory monetary payments to the budget, made in certain amounts, which are irrevocable and gratuitous. GDP (gross domestic product) is the value of final goods and services produced in a country per year by national and foreign citizens and firms. (Source: Budget Code of the Republic of Kazakhstan);
Justification and interpretation	The indicator reflects the total tax revenues to the state budget received by the national government during the year, expressed as a percentage of GDP, that is, the total national income. Taxes include individual and corporate income taxes, property taxes, value added taxes, excise taxes, customs duties, customs duties, and social security contributions. The tax-to-GDP ratio is a leading indicator for assessing the financial internal resources of a government to implement its policies, attract resources to provide physical infrastructure, public goods and services. The ratio of taxes to GDP supports the development of effective tax systems and is an important component of a successful management system. Normalization of data by dividing total revenue by GDP makes it easy to compare this indicator between countries. Comparable and consistent tax statistics, such as the tax-to-GDP ratio, facilitate transparent policy dialogue and provide policy makers with an important tool for evaluating alternative tax reforms and taking appropriate policy actions.
4. Data sources and collection methods	
Data sources	Administrative data from the IAIS E-Ministry of Finance (Form 17.2)
Data collection	Daily tax receipts of the republican and local budgets in terms of budget classification codes and regions.

methods	GDP according to official data of the Committee on Statistics of the Ministry of National Economy of the Republic of Kazakhstan.
Unit of measurement	thousand tenge
Periodicity	Annually/January
5. Calculation method and other methodological considerations	
Calculation method:	The indicator is calculated in percentage terms by the ratio of state budget tax revenues to total GDP and multiplied by 100% for the corresponding reporting period.
Comments and restrictions:	The following types of taxes belong to the tax revenues of the state budget - corporate income tax; - individual income tax; - social tax - property taxes; - land tax - vehicle tax - unified land tax; - value added tax; - excise taxes; - income from the use of natural and other resources; - registration fees; - gambling tax; - taxes on international trade and foreign transactions; - state duty.
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the EPIR website of the Ministry of Finance of the Republic of Kazakhstan. According to the statistical work plan for 2023, the final GDP data will be published by July 31 of the next reporting year, and therefore this indicator is subject to adjustment.
The level of disaggregation:	The data is disaggregated by taxes and other mandatory payments to the state budget.
7. Comparability with international data/standards	Currently, the coverage of OECD Income Statistics includes more than 60 countries and is gradually increasing. It is possible to supplement data on missing countries with alternative data sources such as national accounts.
