

1. Information about the indicator	
Goal	Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development
Task	Enhance North-South, South-South and triangular regional and international cooperation on and access to science, technology and innovation and enhance knowledge-sharing on mutually agreed terms, including through improved coordination among existing mechanisms, in particular at the United Nations level, and through a global technology facilitation mechanism
The indicator	Number of fixed broadband Internet subscribers by speed
2. Information about the organization	
Organization	Bureau of National statistics Agency for Strategic planning and reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator of the number of fixed broadband Internet subscribers in terms of speed refers to the number of fixed broadband subscribers on the public Internet, divided by the advertised download speed.
Basic concepts:	The metric is currently broken down into the following subscription rates: • 256 kbit/s to less than 2 Mbit/s: Applies to all fixed broadband Internet subscriptions with advertised downstream speeds equal to or greater than 256 kbit/s and less than 2 Mbit/s. • 2 Mbit/s to less than 10 Mbit/s: Applies to all fixed broadband Internet subscriptions with advertised downstream speeds equal to or greater than 2 Mbit/s and less than 10 Mbit/s. • Above 10 Mbps. Applies to all fixed broadband Internet subscriptions with advertised speeds at a low level equal to or exceeding 10 Mbit/s.
Justification and interpretation	The Internet has become an increasingly important tool for providing access to information and can contribute to the development and expansion of regional and international cooperation in the field of science and technology, innovation and access to them, as well as the expansion of knowledge exchange. High-speed Internet access is essential to ensure that Internet users have high-quality Internet access and can use the growing amount of Internet content, including user-generated content, services, and information. While the number of fixed broadband subscribers has increased significantly in recent years, and although service providers offer increasingly higher speeds, a fixed broadband Internet network can vary greatly in speed, which affects the quality and functionality of Internet access. Many countries, especially developing ones, have not only a very limited number of fixed

	broadband subscriptions, but also at very low speeds. This limitation is an obstacle to target 17.6, and the indicator highlights the potential of the Internet (especially through high-speed access) to enhance collaboration, improve access to science, technology, and innovation, and share knowledge. This indicator also highlights the importance of using the Internet as a means of development and helps to measure the digital divide, which, if not addressed properly, will exacerbate inequality in all areas of development. Information on fixed broadband speed subscriptions will facilitate the development of targeted policies to bridge these gaps.
4. Data sources and collection methods	
Data sources	The source is the statistical data of the form 2-communication "Communication Services Report".
Data collection methods	The primary data of the respondents on the number of fixed subscribers of the broadband Internet by speed are formed on the basis of the nationwide statistical observation 2-communication "Report on communication services"
Unit of measurement	Thousands of units
Frequency Annually	Frequency Annually
5. Calculation method and other methodological considerations	
Calculation method:	Aggregation of primary statistical data of respondents.
Comments and restrictions:	This indicator refers to fixed (wired) broadband technologies and does not include wireless broadband access technologies.
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website Bureau of National statistics Agency for Strategic planning and reforms of the Republic of Kazakhstan
The level of disaggregation:	Internet speed: 256 Kbit/s to less than 2 Mbit/s, 2 Mbit/s to less than 10 Mbit/s, above 10 Mbit/s.
7. Comparability with international data/standards	ITU develops international definitions, standards and methodologies for measuring the information society and the information economy, and in close collaboration with other regional and international organizations and through its thematic expert groups, ITU is a founding member and key partner in the Partnership on Measuring ICT for Development, helps track SDG targets, and is a member of the UN Committee for the coordination of statistical activities.
