

1. Information about the indicator	
Goal	Conservation and rational use of oceans, seas and marine resources for sustainable development
Task	By 2020, ensure effective regulation of production and put an end to overfishing, illegal, unreported and unregulated fishing and harmful fishing practices, as well as implement scientifically sound business plans in order to restore fish stocks as soon as possible, bringing them at least to levels that can ensure maximum environmentally sound catch. taking into account the biological characteristics of these reserves
The indicator	The share of protected areas in marine areas, percentage of the total area of specially protected natural areas
2. Information about the organization	
Organization	Committee of Forestry and Wildlife of the Ministry of Ecology and Natural Resources of the Republic of Kazakhstan.
3. Definitions and concepts	
Definition	The water area of the eastern part of the northern Caspian Sea with the deltas of the Volga River (within the Republic of Kazakhstan) and the Urals is included in the state protected area in the northern part of the Caspian Sea.
Basic concepts:	A state protected area is a specially protected natural area with differentiated types of protection regime intended for the conservation and restoration of objects of the state nature reserve fund and biological diversity on land and water areas reserved for state nature reserves, state national natural parks, and state natural reserves. Specially protected natural territory -areas of land, water bodies and airspace above them with natural complexes and objects of the state nature reserve fund, for which a special protection regime is established.
Justification and interpretation	The state protected area in the northern part of the Caspian Sea provides opportunities for the development of fisheries, water transport, state geological survey, exploration and production of hydrocarbons, taking into account special environmental requirements established by the Environmental Code of the Republic of Kazakhstan.
4. Data sources and collection methods	
Data sources	The source is the statistical form of the 1-Protected area report.
Data collection methods	The reports are provided by environmental institutions that are assigned state protected areas.
Unit of measurement	Percent
Periodicity	Minute by minute
5. Calculation method and other methodological considerations	
Calculation method:	The share of the state protected area of the northern part of the Caspian Sea and lake ecosystems is calculated as a percentage of the total area of specially protected natural territories of the republic.
Comments and restrictions:	Restrictions are made in accordance with articles 70-73 of the Law of the Republic of Kazakhstan "On Specially Protected Natural Territories" dated July 7, 2006 (hereinafter referred to as the Law on Protected Areas).
6. Data availability and disaggregation	

Data availability and gaps:	Information about the state protected area of the northern part of the Caspian Sea can be found in the Law on Protected Areas.
The level of disaggregation:	The data is disaggregated by land categories, zoning, and the specifics of its limitations established by legislation in the field of specially protected natural areas.
7. Comparability with international data/standards	Discrepancies may exist between the indicator data among internationally represented countries, as the proportion of specially protected natural areas varies from country to country.
8. References and documentation	-
