

1. Information about the indicator	
The goal	<i>Promote the creation of a peaceful and open society in the interests of Sustainable Development, provide access to justice for all, and create effective, accountable, and broadly participatory institutions at all levels</i>
Task	<i>Significantly reduce the spread of all types of violence and reduce the mortality rate from this phenomenon worldwide</i>
Indicator name of the global indicator	<i>Number of victims of premeditated murder per 100,000 people by gender and age group</i>
National indicator	<i>Number of victims of premeditated murder per 100,000 people</i>
2. Information about the organization	
Organization	<i>Committee on Legal Statistics and special accounts of the general prosecutor's Office of the Republic of Kazakhstan</i>
3. Definitions and concepts	
Definition	<i>The figure is defined as the total number of victims of premeditated murder divided by the total population per 100,000 people.</i>
Basic concepts	<i>Murder, that is, causing illegal intentional death to another person (source: Criminal Code of the Republic of Kazakhstan dated July 3, 2014 No. 226-V)</i>
Justification and explanation	<i>This indicator is widely used at the national and international levels to assess the most extreme types of cruel crimes, and also reflects the obvious weaknesses of the security system of citizens. Ensuring safety from violence is a necessary condition for the safe and active life of people, it is also necessary for the free development of society and the economy. Intentional murders occur in all countries of the world, this indicator has a global scale. It is necessary to monitor premeditated murder in order to better understand their causes, thoughts and consequences and develop effective preventive measures in the long term.</i>
4. Sources and collection methods	
Data sources	<i>Source-statistical data in Form 1-M"on registered criminal offenses".</i>
Data collection methods	<i>Registration of citizens ' applications and applications for crimes.</i>
Unit of measurement	<i>In terms of 100,000 people</i>
Frequency	<i>monthly</i>
5. Calculation method and other methodological considerations	
Calculation method:	<i>The figure is calculated as the total number of victims of premeditated murder registered in the current year, divided by the total number of permanent population in the same year by 100,000 people.</i>
Reviews and restrictions:	<i>The International Classification of crimes for statistical purposes, ICCS 2015 provides important explanations for the definition of intentional homicide. In particular, it is said that the types of crimes listed below are also included in the concept of premeditated murder:</i> - serious murder - honor killing - death as a result of terrorist acts - murder related to the purchase - murder of a woman (feminicide) - child murder - premeditated murder - extrajudicial execution - murder due to abuse of power by representatives of the law

6. Data availability and fragmentation	
Data availability and gaps:	<i>The data is available on the website of the Committee on Legal Statistics and special accounts of the prosecutor general's Office of the Republic of Kazakhstan.</i>
Disassembly level:	<i>The data are divided depending on the gender and age of the victim, geographical position.</i>
7. Comparison with international data / standards	<i>There may be discrepancies between the calculations of countries and the calculations presented internationally, as the national data may refer to the national definition of intentional homicide, while the data provided by the United Nations Office on drugs and crime is intended to ensure compliance with the definition of the international crime classification for statistical purposes, ICCS 2015 (ICCS), approved in 2015 The United Nations Office on drugs and crime is making particular efforts to count all murders that fall under the definition of premeditated murder (according to the international crime classification for statistical purposes, ICCS 2015), while national data can be made according to national legal systems and not Statistical Classification. The gradual introduction of the international crime classification for statistical purposes, ICCS 2015 (ICCS) can improve the quality and comparability of national and international data. The intentional homicide rate can also vary due to the use of different demographics.</i>
